

Argentina Federal Forces adopted ViPRO Body worn camera

Mission

Buenos Aires, the largest city in Argentina, with a total of 17 million inhabitants living in this city, approximately more than 6 million tourists visit Argentina each year.

Therefore, to avoid the increase in crime, as well as to improve and modernize the operational

equipment of the Federal Forces for the exercise of their work and for their own protection, Ministry of Security of Argentina began looking for the complete global security solution that can meet the needs of the city.

Organization:
Ministry of Security of Argentina

Location:
Buenos Aires, Argentina

Application:
Security, control, avoid crime

Industrial segment:
Government

Partner:
Automation Systems S.A

Total quantity deployed:
1120pcs BV-A12s series

Challenge

To meet the city's need, among so many security products, the Ministry of Security chose the body camera that is easy to use and manage, it is also a product widely used in Latin America. Ministry of security does not need users to operate the equipment, they need a body camera that can record many hours at a time, thus to have the evidence, deter crime and improve the security of the city.

Due to the design of the equipment, the Ministry of Security asks that the equipment be robust, the battery and memory card must be internal, not replaceable, to avoid internal theft.

Solution

Among many competitors, in the end the Ministry of Security chose ViPRO's solution, BV-A12S body camera. BV-A12s has a wide angle of 127 °, which allows you to take video and audio capture in any type of condition, be it day, night or in poor lighting conditions. The collected images are stored in an internal memory that the camera has (in encrypted and protected form). In turn, it contains a GPS to have the geographical reference, the date and the time of what was filmed.

And the camera supports H.265 encoding, which helps save storage space, and does not allow the deletion of files from the camera, this function helps a lot to protect evidence, continuous recording more than 14 hours is also great camera advantage.

BV-A12S with all its strong functions, plays a fundamental role in generating evidence against complaints of mistreatment and abuse of power.

User Feedback

“We have seen throughout this year of management, the usefulness of these cameras to control, supervise and supervise the work of personnel in critical situations of high risk, such as raids and other procedures, which allow us, both the authorities of each force, as the Ministry authorities, have a much clearer vision of these situations. ”

- Sabina Frederic, minister of security ministry.

“We value the permanent effort of the Ministry of National Security. **These cameras are perfectly adapted to the operational needs of the Argentine Federal Police.** They will be linked to our Operations Center. Thus, we continue to scale the technical capacities to generate links in all the systems we have to fully record evidence and discourage escalations of violence.”

- Juan Carlos Hernández, Chief of the Argentine Federal Police.
